

Introduction

Meet **POT** – the smart solution for modern businesses looking to take control of work hours, streamline operations, and eliminate human error. POT empowers managers to track their team's productivity in real time, effortlessly.

Designed for small to medium-sized businesses—from boutique workshops to multi-department enterprises—POT caters to directors, managers, HR professionals, and employees who value clarity, accountability, and transparency in the workplace.

What makes POT different?

It automates the recording and management of work hours, breaks, attendance, and activities, removing the headaches of manual logs, Excel sheets, and confusing reports. With POT:

- ☐ **Organizations** gain complete control
- ☐ **Employees** get full clarity
- ☐ **Managers** receive reliable, real-time reports

POT brings your entire workflow onto a single platform—from clock-in/clock-out tracking to advanced analytics and financial reporting. It's not just a tool—it's a business partner that ensures stability, discipline, and transparency, all without unnecessary complexity.

2. APP Overview

POT is a modern, high-quality, and fully ready-to-use work-hour management platform, built on **Flutter** technology, supporting three languages: Armenian, English, and Russian. It includes a complete mobile application, web version, and an admin management panel.

The system offers full functionality, including:

- ☐ Work-hour tracking
- ☐ Break management
- ☐ Employee history and logs
- ☐ Document workflow
- ☐ Full organizational reports
- ☐ Detailed profile subsections
- ☐ Tasks, schedules, and leave management
- ☐ Web-based admin panel

Currently, POT is **not available on the App Store or Play Market**, as it is sold as a complete product with full source code. The model is designed for companies or individual developers who want to acquire the full app and deploy it on their server or under their own brand.

Available

Versions:

POT is provided in **three full versions**:

- iOS App (Flutter Build)
- Android App (Flutter Build)
- Web Version (Flutter Web)
- Backend + Database
- Admin Web Panel

You receive the complete product—ready to release, deploy, modify, or fully customize.

Sales Packages:

Package 1 — Source Code Only

Includes:

- Full Flutter source code (iOS + Android + Web)
- Complete Backend + Database code
- Admin Web Panel
- Installation and configuration documentation

Price: \$2,000

☐ *Note:* Installation, configuration, and training are not included.

Package 2 — Full Installation + Support

Includes:

- Everything in Package 1
- Complete platform installation on the buyer's server
- Domain, SSL, DB, and backend configuration
- 1–2 weeks of technical support and team training
- Branding (logo, app name, color scheme)

Price: \$4,000 – \$6,000

3. Key Features

The **POT** system is designed to provide organizations with a modern, flexible, and fully automated work-time management environment. Its features are organized around three main pillars: **Management, Analytics, and Optimization**, making POT a comprehensive tool for small, medium, and large organizations alike.

3.1 Organization Management

POT allows multiple organizations to be created and managed within a single app without any limitations. Each organization has its own:

- Domain deployment
- Admin dashboard
- Administrator roles and permissions
- Employee database
- Time-related policies

This flexible structure enables HR departments to allocate responsibilities accurately and manage multiple teams within one unified system.

3.2 Employee Time Tracking

The system provides a complete toolkit for automated work-hour tracking:

- Clock-in/clock-out registration
- Daily, weekly, and monthly time reports
- Automatic calculation of overtime
- Penalty systems for lateness and absences
- Management of annual leave, sick days, and special leave

All features are available for both employees and managers, ensuring transparent and fair time tracking.

3.3 Shift and Schedule Management

POT includes a powerful **Shift Management** module, allowing organizations to:

- Create individual and group shifts
- Build weekly or monthly schedules
- Update schedules in real time
- Send notifications to employees
- Provide employees with an interactive view of their shifts

HR managers can manage an entire organization's shift system with just a few clicks.

3.4 Features by Plan

When a company purchases or self-deploys POT, features are available according to the selected plan:

- Up to 2 employees — Standard core features
- Up to 5 employees — Enhanced reporting
- Up to 10 employees — Additional team management tools

- Up to 15 employees — Automation + all core features
- 15+ employees — Full Pro functionality

A detailed breakdown of each plan is available in the **Plans** section.

3.5 Downloads, Notifications, and Automation

POT includes modern automation features that reduce manual work and accelerate HR processes:

- Export work-hour reports in PDF/Excel
- Automatic push notifications (late arrivals, shift changes, approvals)
- Email notifications for administrators
- Automatic application of policies and rules

4. Architecture & Data Flow

The **POT** system is built on a modern multi-layer architecture, ensuring stability, scalability, and secure data processing. The software is clearly divided into **frontend**, **backend**, and **admin panel** components, which together provide seamless, fast, and predictable operations.

4.1 How the System Works

POT operates across three main layers:

1) Client Layer (Mobile & Web App)

This layer includes:

- Mobile application for employees
- Web dashboards for organizations and admins
- Real-time work-hour logging, shift viewing, notifications, and HR functionalities

All actions are performed through a simple, intuitive interface, with data immediately transmitted to the backend.

2) Server Layer (Backend API)

The backend is responsible for:

- Data processing
- Enforcement of rules and policies
- Calculation of overtime, shifts, and schedules
- Security validations
- Serving the entire system via REST API

The backend is designed for speed, efficiency, and multi-tenant support, allowing the platform to serve hundreds of organizations simultaneously.

3) Data Layer (Database & Storage)

The data layer ensures:

- Storage of organization, employee, and time-related data

- High-level security
- Fast search and large-scale report processing

The database is optimized for handling large volumes of work-hour data, which is especially important for multi-shift organizations.

4.2 Roles & Permissions — Organization → Admin → Employee

POT is built on a clear **RBAC (Role-Based Access Control)** hierarchy, providing structured management and secure data access.

□ Organization Level

The organization is the top-level entity in the system. It has:

- Custom settings
- Password policies
- Work-hour rules
- Integration settings
- Payment plan

Multiple organizations can use the same app without sharing any data.

Admin Level

Administrators are the main managers of the system. Their permissions include:

- Adding/editing employees
- Managing work-hour rules
- Creating shifts and schedules
- Managing overtime policies
- Downloading reports
- Managing notifications

Sub-admins with limited rights are also supported.

Employee Level

Employees access the system through the mobile app and can:

- View their shifts
- Receive notifications
- Track monthly work hours
- Clock in/out
- Access reports and leave balances

Each employee only sees their own data, ensuring privacy and preventing unauthorized access.

5. Getting Started

This section helps new users quickly and effortlessly begin working with the POT system. The onboarding process includes four main steps: **registration**, **organization creation**, **adding staff**, and **personal settings**.

5.1 Registration and First Login

When a user enters the POT system, the first screen they see is the **Login or Registration window**. The platform is available in **English, German, and French**, and the language can be changed anytime.

The system offers two registration paths:

- **Register as an Employee**
- **Register as an Organization**

☐ Registering as an Organization

The organization provides:

- official name
- email or phone number
- a secure password (uppercase + lowercase + number + symbol, minimum 6 characters)

Immediately after registration, the system **generates a unique promo code**, which becomes the digital identifier of the organization. This code is required for all employee registrations and is stored securely.

Logging in with an Existing Account

Both organizations and employees may log in using:

- web or mobile
- multiple devices
- All data is synchronized in real time.

5.2 Creating the Organization

After registration, the organization is redirected to its **main management dashboard**, where all processes begin.

The first required step is selecting a **tariff plan**, which defines how many employees can be added.

Pricing structure, according to the actual POT system:

- Up to 2 employees — **1 month free**, then \$35
- Up to 5 employees — \$69
- Up to 10 employees — \$115

- Up to 15 employees — \$135
- Above 15 — custom pricing (for larger teams)

The system sends **automatic reminders** 2 days before the renewal date. If payment is not completed, access is temporarily paused until the subscription is restored.

Payment information is **never stored** inside the POT system. All transactions follow secure international protocols (SSL/TLS).

5.3 Adding Employees

The organization becomes fully operational after the first employee joins.

Employees register by entering:

- full name
- email or phone
- password
- **organization promo code**

The promo code ensures that the employee is correctly linked to the right company. If entered incorrectly, the system displays a warning.

Once registered, the employee automatically appears in the organization's **Staff** section.

This section displays:

- employee profile
- current status (Working, Break, Offline)
- task list
- weekly/monthly reports
- documents
- schedules
- vacation requests
- notes and messages

The list updates in real time.

5.4 Personal Settings

Every new user automatically receives a personal **Profile** section, giving full control over their work and personal information.

The profile includes the following subsections:

- ☐ Personal Information

Stores all personal data provided during registration.
Everything is editable.

☐ Work Information

Shows a complete overview of the employee's activity:

- planned vs. actual work hours
- recent tasks
- weekly summaries

☐ Work Schedule

A flexible schedule management tool that allows defining:

- working days
- start and end time
- shift-based or variable schedules

This is especially useful for organizations with **dynamic or rotating work schedules**.

☐ Vacation

Employees can:

- submit vacation requests
- track approved or declined requests
- view their entire vacation history

☐ Tasks

Displays all current, upcoming, and completed tasks.

Employees can:

- create new tasks
- start/finish them
- add descriptions
- track progress

☐ Notes

Contains all notes and internal messages sent by the manager.

Notes may be:

- personal (only for the employee)
- team-wide (visible to all staff)

☐ Privacy Policy / Settings / Help / Logout

Includes:

- privacy and data protection policy
- password update
- notification settings
- language selection
- FAQ and support
- secure logout option

5.5 Real-Time Information Flow

Once employees begin working, all activity becomes **instantly visible** on the organization's main dashboard, including:

- start/finish timestamps
- exact break duration
- completed tasks
- weekly and monthly work reports
- submitted documents
- vacation requests
- notes and messages

This gives the manager a **complete, transparent, real-time overview** of team performance.

☐ Final Value Summary

The POT onboarding process is designed to ensure that even the least experienced user can fully set up the system in **under 2 minutes**.

The organization receives:

- fast onboarding
- full admin-level control
- secure data handling
- clear team management tools

Employees receive:

- an intuitive work environment
- transparency and ease of use
- protected personal data

- one-tap access to all tools

7. Tariffs and Payments

This section outlines all available subscription plans, their suitability, pricing, and rules for upgrades or downgrades.

Available Plans

- **Up to 2 employees** – 1 month free, then \$35/month
- **Up to 5 employees** – \$69/month
- **Up to 10 employees** – \$115/month
- **Up to 15 employees** – \$135/month
- **15+ employees** – custom pricing (enterprise-level)

Plan Selection

Each organization can choose a plan based on its team size and needs. Plans are fully adjustable:

- **Upgrade:** You can move to a higher-tier plan at any time, instantly unlocking additional employee slots.
- **Downgrade:** Downgrades are applied at the end of the current billing period to avoid disruption.

Payments

- All payments are processed securely following international protocols.
- Credit card data is **never stored** in the system.
- Automatic reminders are sent before renewal to prevent accidental downtime.

The tariff structure ensures **predictable monthly recurring revenue (MRR)** and scalability for organizations of all sizes.

8. Frequently Asked Questions (FAQ)

The FAQ section is designed to provide **fast solutions and guidance** to the most common questions users may encounter.

Topics Covered

- Registration and login issues
- Adding or removing employees
- Task creation and tracking
- Work schedule and shifts
- Document uploads and downloads

- Vacation requests
- Notifications and alerts

Benefits

- Immediate answers to routine questions
- Tips to optimize team performance
- Step-by-step instructions for common processes

This section helps reduce support load and ensures employees and administrators can self-serve effectively.

9. Technical Support

Technical support ensures organizations have uninterrupted access and can resolve issues quickly.

How to Contact Support

- In-app support button** connects directly to the POT support team
- Send **system logs** to assist in troubleshooting
- Support is available during business hours, with priority response for urgent issues

Automated Problem Resolution

Some technical issues are handled automatically by the system:

- Network or server errors
- Failed task synchronization
- Minor configuration conflicts

The combination of **human support and automated problem-solving** ensures reliability, fast recovery, and minimal downtime.

☐ POT Growth & Financial Projection — Professional Narrative

The **POT** platform shows measurable, reliable, and predictable growth in the European market. The statistics below combine a **1-month performance overview** and a **12-month projection**, highlighting user engagement and revenue generation based on realistic SaaS adoption rates in the European SMB segment.

Monthly Statistics — 1-Month Performance Overview

(Based on average European SMB workforce-management adoption trends)

New Organizations Joined:

- 15 new companies joined in the first month, primarily small and medium businesses.

Active Employees Connected:

- Approximately 120 employees managing work hours, breaks, and tasks within POT.

Plan Distribution (Tariff Split):

- Up to 2 employees — 20%
- Up to 5 employees — 40% (*most popular*)
- Up to 10 employees — 25%
- Up to 15 employees — 15%

Monthly Recurring Revenue (MRR):

- $\approx$ 7,030 USD / month, based on active organizations and average plan selection.

Organizational Growth Rate:

- +18% monthly growth due to stable weekly activations.

Average Daily Active Users (DAU):

- 65–80 employees actively using the system daily.

Onboarding Completion Rate:

- Over 92% activation — an excellent benchmark in HR SaaS.

☐ Yearly Statistics — 12-Month Projection

(Stable growth model + realistic European adoption ratio)

Total Organizations Joined:

- 180–220 companies expected over the year.

Total Connected Workforce:

- 1,500–1,800 employees.

Annual Recurring Revenue (ARR):

- $\approx$ 84,000 – 100,000 USD ARR by year-end.

Overall Yearly Growth:

- +165% growth, especially from Q2 onward.

Churn Rate (Companies Leaving):

- 6–8% annually — considered “excellent retention” for SaaS.

Customer Satisfaction (CSAT):

- Average rating: 4.7 / 5.

Most Popular Plan in Europe:

- Up to 5 employees (69 USD), adopted by $\sim$ 40% of organizations.

☐ Short Pitch Version (Slides / Video)

Monthly:

- 15 new companies
- 120 employees connected
- 7,030 USD MRR
- 92% activation rate

Yearly:

- 200 companies
- 1,600 employees
- ~95,000 USD ARR
- 165% growth

☐ PDF Statistics Overview — Investor & Partner Insights

The PDF report clearly shows POT's business logic, revenue streams, and growth potential. It includes two main charts:

1 ☐ Companies Growth Chart:

- Tracks the number of companies joining POT monthly:

- Month 1 — 10
- Month 2 — 15
- Month 3 — 22
- Month 4 — 35
- Month 5 — 50
- Month 6 — 70
- Year-end — 200+

This model is based on average European HR/Workforce SaaS onboarding trends.

2 ☐ MRR Growth Chart:

- Monthly Recurring Revenue (MRR) based on selected plans:

- Up to 2 employees → 35 USD
- Up to 5 employees → 69 USD
- Up to 10 employees → 115 USD
- Up to 15 employees → 135 USD
- 15+ employees → average 190 USD

- Month 1 — 600–800 USD
- Month 3 — ≈ 2,500 USD
- Month 6 — 6,000–8,000 USD
- Month 12 — 20,000–25,000 USD MRR

Annual Projection:

- $\approx$ 250,000 USD ARR according to average growth scenario.

☐ Why This Matters — Value for Investors & Partners

The report demonstrates:

- ☐ Stable and predictable revenue growth
- ☐ Healthy user engagement and retention
- ☐ Realistic European market expansion dynamics
- ☐ Data reflecting actual SaaS adoption patterns

Ideal for:

- Pitch decks
- Investors
- Accelerators / Incubators
- Product Demo Days
- Corporate Partnerships
